| | --- | --- | --- Brushes used in Photoshop Brushes have four parts: their handle, flow control panel, tone preview, and selection rectangle. The handle is where you use to adjust the brushes' size and attributes. The flow control panel contains sliders that control the brush's strokes and opacity. The tone preview displays the palette of colors used to create the stroke. The brush is selected when you have a flow control panel open.

The Select Rectangle options are useful for cropping, combining, separating, and inverting objects in an image. You can also use the selection rectangle to change the color and size of the paintbrush strokes. You can access these options using the Rectangle Selection tool or the Selection Brush tool. You can create your own brush by using a brush palette that is stored in the brush presets or a specially designed brush that is saved in the Brush Presets folder. Brushes can be categorized in

several ways: **Strokes:** These are the most commonly used brushes in Photoshop. They consist of a brush size, a stroke opacity, a flow, and a size variation. They are the basic brushes that you will use most often to create and modify images. **Highlights:** These are semi-transparent brushes that can be applied to existing strokes to create highlights or shadows, to lighten or darken a stroke, or to combine two strokes. **Compound brushes:** These are brushes that consist of a group of Basic

(highlights, shadows, etc.) plus a texture brush. The texture brush contains the patterns and textures that you can use to create special effects. You can also create compound brushes by using the stock brush tool in Photoshop. The Basic setting for the brush control and selection settings is set to default in the Brush Presets dialog box (Figure 5.3). To change the settings for a brush, you can change these settings in the Brush Presets dialog box, as shown in Figure 5.4. Figure 5.3 Figure 5.4 The three

most frequently used brush settings are shown below. * * * **Degree Dialer** The Degree Dialer is set to the Basic brush's default settings. You can change the flow, opacity, and the size variation for the brush in the Brush Presets dialog box. * * * * *
