The request is shown below. The username and password are validated using the request : `response = requests.post('', data = { "username": "myusername", "password": "mypassword", })` I've tried to use requests and bs4 to do the same but I'm not successful to retrieve the response (401 and 302) and also the request is not sent to the authentication web service. Here is my python code (I only present the headers part because the code works as expected if I use curl): `import requests import urllib3 from bs4 import BeautifulSoup headers = {'Accept': 'application/xml,application/xhtml+xml,text/html;q=0.9,text/plain;q=0.8,image/png,*/*;q=0.`
