Optimized gameplay to unleashing your full potential HyperMotion™ Tech: Regain control of your off-the-ball runs, gaining a new way to feel like you're in complete control of the game. New fluid player running animations, animations that were unparalleled in the history of the franchise. An enhanced player facial animation system. FIFA Sound Engine and sound effects: 12,000 more unique crowd reactions. Available via download on Xbox One and PlayStation 4. Player Talk! Optimized gameplay to unleashing your full potential "For the first time in the history of FIFA, we wanted to make a game that is about you." This sentiment drives our philosophy at the team. We listen to player feedback and have been continuously modifying and improving gameplay since FIFA 17 released in September 2017. We've made improvements and refinements to areas such as ball handling and player movement, as well as the overall fluidity and speed of your gameplay. We've added an adrenaline rush to the off-the-ball battles and have smoothed out the pace of in-game gameplay, in order to reduce the burden on players. In addition, we've introduced a new form of 'controlled aggression,' in which you can move in bursts, reducing the amount of time spent waiting for reaction speed to reach your target. Improved Player Physics FIFA's physics engine, known as PhysX, lets us deliver new and intuitive gameplay systems across all of our games. In FIFA 19 and FIFA 20, this allows us to add movement and momentum to gameplay. As a result of the changes that we've made, your player movement is more fluid and smoother, allowing you to make better decisions on the pitch. In addition, we've tuned a range of player behaviors. This includes player collisions, ball dribbling, chip shots and crossing shots. Dribbling
