I've loaded it into my iPhone app. When I run the app I get the following error: Error Domain=SQLiteDatabaseCode=-1 "could not open database file" UserInfo=0x5d8610 {NSLocalizedString=could not open database file}, NSLocalizedFailureReason=Could not open the database. Please check the database file path. I have the database file stored in a place I can see it with a file browser. The file system is locked (I have my developer certificate installed and a developer account) so I cannot delete or move the file. I've tried the following: I've gone into Sqlite admin and made sure the file is readable and writeable. I have the database file appended to a SO file in the documents directory. I've set the permissions on the file. I can read everything else in that file except for the header (shown

below). + (sqlite3*)
