Q: How to get a really clean log? I want to run something like this from `__future__ import division import sys sys.path.append('/Users/me/projects/db_migration') import versions import some_module import another_module # Run migration and store the result in a "clean" logfile (without __future__ imports) like errors: import mysql.connector while profiling: print(application_name, current_app, version) to inspect results in the future (e.g. after a bug is introduced). I tried to use python -B to strip the imports but this just works for imports that have been already loaded (__future__ imports). How can I do this? A: You should use the builtin logging module. It will automatically do the stripping as you can see in the example below. If you want to do something special for the logging, you can customize a filter as you can see here. from __future__ import division import sys import logging sys.path.append('/Users/me/projects/db_migration') import versions import some_module import another_module # Run migration logging.basicConfig(stream=sys.stdout, level=logging.DEBUG) logging.info("Info in basic level") logging.error("Error level") In case you don't want to see the "INFO in basic level" you can also use: logging.basicConfig(stream=sys.stdout, level=logging.INFO) Q: use of the idiom "in a huff" I have been struggling with the notion of in a huff. Would anyone mind explaining the very basics of this idiom? By that I mean, is it a sequence, phrasal verb, or something else? A: It doesn't have to be short. "I would like to talk to you in a huff", "I would like to talk to you in an ugly mood", "I would like to ask you whether I can do something or not, in a huff", "I would like to make you a cup of tea in a huff", "I would like to tell you something that I did"`

Video Bokep Sandra Dewi 3gp Indonesia

(Virtual I. This video has a very large size, so please be kind. Documenting code with Mercurial Is there any method to describe in Mercurial what you are going to do in a given code block (so that the result of the hg status should be "clean")? I want to have documentation for my Mercurial repositories, but can't think of any way of describing what I'm going to do on a given code block. A: If I understand you correctly, you want something like the comments that you get on PHP files that describe what is going on in that block. If so, you can try something like this. [section:config] # This section configures the webservice to run on port 8080. # # Notes: # - Set hostname here for the webservice to use. # [http] port = 8080 # port = 3000 webservice = mywebservice # webservice = localhost # webservice = 127.0.0.1 # webservice = ::1 [files] uploads = uploads/ #uploads = uploads/ [section:templates] # Set the path here for the templates directory. # # templatesPath = template/ # templatesPath = template/ [section:themes] # Set the path here for the themes directory. # # themesPath = template/themes/ # themesPath = template/themes/ [section:styles] # Set the path here for the styles directory. # # stylesPath = template/styles/ # stylesPath = template/styles/ [section:templates] 595f342e71
