But in this semester I felt that there are many interesting and different topics. bupena kelas 5 sd pdf Â· Kurikulum Tematik (Berlangganan) Sungguh lebih menarik lihat kalau tematik saya download bupena kelas 5 sd penerbit, martin instruments, andrew. Download bupena kelas 5 sdQ: Garbage collector behaviour If I have an object as follows: public class A { public string \_a; public string \_b; public string \_c; } Will this object be cleaned up by the garbage collector as an idle object? And by the way, what happen if it is an object of a type whose class is final (meaning that there is no other class instance of this type)? A: It will be cleaned up if it's on the stack (assuming it's not reachable, which it shouldn't be in this case) and not actively referenced (useful, and not static). The System.gc() call will force a GC run if that object is the sole object in the heap. If you create a custom type that implements IDisposable, and declare that the object itself is disposable, you can skip a GC, but be sure to also create a Dispose() method to properly clean things up. This question has great, detailed information. A: The garbage collector usually runs automatically in a timely fashion; so if the object isn't doing something important, it's pretty likely to be disposed at some point, and possibly cleaned up in the background by the GC. Making the object IDisposable doesn't
